

ENERGY POLICY

The company is committed to practice and continually improve energy efficiency and energy conservation techniques throughout the company premises, plants, and equipment. The company shall control energy consumption and shall use energy in the most efficient, cost-effective and environmentally responsible manner. This policy shall apply to all Sadara facilities, business units, employees, and contractors in service to our business.

We are committed to:

- Support development and implementation of energy management programs based on economically viable initiatives, with the objective of improving the company's energy performance.
- Set challenging and achievable targets and regularly review energy management objectives and targets.
- Promote energy performance improvement practices throughout the life cycle of the facilities and allocate adequate resources to achieve the objectives and targets.
- Comply with the relevant energy management laws, regulations, and codes of practice.
- Ensure the availability of energy performance data and all energy management system (EnMS) related information.
- Work toward sustainable use of renewable energy sources where feasible.
- Build strategic partnerships with government, private and other stakeholders to achieve superior results.
- Encourage procuring energy-efficient products and services to ensure the highest level of energy performance.
- Design, promote and improve a culture of energy conservation and energy efficiency across all company organizations.
- Ensure that energy performance improvements are integrated in the design activities of new, modified, and renovated systems, equipment, processes, and facilities.

Fayez M. Al Sharef
Chief Executive Officer
